                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                   This sequence represents a Staphylococcus aureus protein of unknown function, and is encoded by a DNA sequence of the invention.

The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides.

Conditions which may be treated include bacterial infections, especially conditions.
                                                                                                                                                                                                                                                                                                                           respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveltis; endopthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; energyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by cances. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, Mypertosis and osteonyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a cample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies can be used to downregulate expression and activity of P. acnes polypeptides and activity of P. acnes polypeptides and clivity of P. acnes proteins the antibodies can be used to downregulate expression and activity of P. acnes proteins by cances infections. The acnes propaptides and clinked immunosorbent assay (ELISA).

Cherefore treat P. acnes infections. The acnes presence, for example, by canzyme linked immunosorbent assay (ELISA).

Cherefore treat procession and activity did not form part of the printed procession and activity of P. acnes presence in the printed assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint, central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

The invention in laters to isolated polymuctroule (1) and polymerase chain reaction (FR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymuctacotides are also used in diagnostics as expressed sequence tags polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical anaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and cannon acid sequences. ABGO010-ABG30377 represent novel human caid sequences and for his patent did not appear in the printed seculation, but was obtained in electronic format directly from WIPO at the vipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay;
                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 19; DB 22; Length 100;

                                                                                                                                                                                                                                                                                                                                      Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveltis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and determining the amount of bound protein in the sample. The production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by the squence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                 Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        7-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and ostecomyalitis), uveltis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The collypeptides may be used as antigens in the production of antibodies polypeptides may be used as antigens in the production of antibodies of downregulate expression and activity of P. acnes polypeptides and claymost the antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by carginate inked immunosorbent assay (ELISA).

C. Note: The sequence data for this patent did not form part of the printed at the collection of antibodies and patent did not form part of the printed at the collection of antibodies and activity of P. acnes presence, for example, by a pecification, but was obtained in electronic format directly from WIPO at the collection of a printed at the collection of antibodies and activity of the printed and activity of the collection of antibodies may also be used as a pecification, but was obtained an electronic format directly from WIPO at the printed and activity of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

activity, and can be used in gene therapy and vaccine production. (1)

c activity, and can be used in gene therapy and vaccine production. (1)

creatment of diseases associated with inappropriate (1) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (1) by expressing inactive proteins or to supplement the patients own production of (1). Additionally, (1)

c supplement the patients own production of (1). Additionally, (1)

polynucleotides may be used to produce the secreted (1), by inserting polynucleic and show and to a host cell and culturing the cell to express the protein. (1) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK84942 to AAK87950 and AAM82169 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                           ő
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          that are highly expressed in uterine tumour tissue and which have mainticancer and cytostatic activity. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) I are used (i) to identify agents suitable for treatment of uterine or are used (i) to identify agents suitable for treatment of uterine or adometrial cancer; (ii) directly for treating these forms of cancer (including expression from generapy vectors) and (iii) for generation of specific antibodies. (A) are identified by assembling ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel human nucleic acid (cDNA) sequences (A),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   <u>ы</u>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid sequences expressed in uterine cancer tissues, and derived polypeptides, for treatment of uterine and endometrial cancer and identification of therapeutic agents \cdot

epitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in screening, diagnostic and therapeutic applications including active hacterial colonisation and methods for the prevention of bacterial colonisation in an animal such as a human. The CBP epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as well as in the formulation of compositions for the prevention of S.
                                                                                                                                                                        aureus infection.

                                                                                                                                                                                                                                    ö
(expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTS from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. ANYS9941-Y60328 represent protein fragments encoded by the human endometrium tumour cDNA library derived EST fragments represented in AAZ41981-Z42121.
                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody that interacts with collagen binding domain of Staphylococcal cna gene product – useful to prevent bacterial sepsis in animal infected with Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This protein comprises Staphylococcus aureus collagen binding protein (CBP) epitope M17, i.e. amino acids 151-297 of full-length CBP, plus a vector-derived N-terminal peptide. Claimed 441, 849 and 1500 bp nucleic acid sequences (see AAF93436-38) respectively encode CBP epitopes M17, M31 and M55 (see AAW3155-54) that confer protection against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Collagen binding protein; cna gene; sepsis; infection; microblail surface component regonising adhesive matrix molecule; MSCRAMM; adhesin; vaccine; immunisation; diagnosis; therapy; epitope M.T.
                                                                                                                                                                                                                                    ;

The sequences given in AAR39712-13 represent varient neutral proteases based on the Aspergillus oryzae protease sequence (see also AAR39711).
                                                                                                                                                                                                                                                                       This sequence represents a wildtype protease which may be used as the basis for the production of a varient neutral protease. The varient protease has either Cys6 or Cys78 substituted with an amino acid which has no -SH group. The varient proteases (see also AAR39713-14) have lower thermal stability than the WT and may be used in soy fermantation microorganisms. Soy produced by these microorganisms may be made into food products which will not be degraded by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antibody winton recognizes a contager Duration region including CNA19 of CNA protein from Staphylococcus aureas. This antibody is cross-reactive to collagen binding region of both S. aureus or S. epidermidis in the statement of preventing or treating S. aureus or S. epidermidis infection in human or animal, and for displacing S. aureus or S. epidermidis bound to collagen. Antibody of the invention is useful for interfering with, modulating, and inhibiting the binding interactions between Staphylococcal bacteria and collagen. Action of Staphylococcal bacteria or Staphylococcal collagen or binding interactions of Staphylococcal infection, as research tools, for development of vaccine for passive immunisation against Staphylococcal infections, and in production facilities or laboratories to isolate infections, and in production facilities or laboratories to isolate development of waccine for passive immunisation against staphylococcal instruments in order to reduce or eliminate the possibility of them becoming infected or further spreading the present sequence is S. aureus CNA19 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ö.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an antibody which recognises a collagen-binding
                                                                                                                                                                                                                                                                                                                                                     Novel isolated antibody which recognizes collagen-binding peptide such as CNA19 peptide from Staphylococcus aureus, useful for preventing or treating Staphylococcus aureus or epidermidis infection

                                                        ö
These varient proteases have either Cys6 or Cys78 substituted with an amino acid which has no -SH group. These varient proteases have lower thermal stability than the WT and may be used in soy fermantation microorganisms. Soy produced by these microorganisms may be made into food products which will not be degraded by the presence of protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequences given in AAR39712-13 represent varient neutral proteases based on the Aspergillus oryzae protease sequence (see also AAR39711). These varient proteases have either Cys6 or Cys78 substituted with an amino acid which has no -SH group. These varient proteases have lower thermal stability than the WT and may be used in soy fermantation microorganisms. Soy produced by these microorganisms may be made into food products which will not be degraded by the presence of protease.
                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                            Wildtype; protease; varient; neutral; mercapto group; food products; thermal stability; soy fermantation.

The polynucleotide sequence given in AAA78381 to AAB78432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antinflammatory; ophthalmological; antirheumatic; antidiathrhitic; antipilariconalistic; antidiaricopial; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polynucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other disorders of the immune system; (c) angiogenesis disorders; (b) disorders of the immune system; (c) angiogenesis disorders; (d) hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases associated with increase apoptosis; (g) neurological diseases; and (h) infectious diseases. They are also used to promote wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This protein comprises Staphylococcus aureus collagen binding protein (GBP) epitope M31, i.e. amino acids 61-343 of full-length composed with a vector-derived N-terminal peptide. Claimed 441, 849 and 1500 bp nucleic acid sequences (see AAT931552-54) that confer canced CBP epitopes M17, M31 and M55 (see AAT931552-54) that confer concertion against S. aureus infection. These nucleic acid sequences can be used in the recombinant production of the CBP epitopes. The CBP protein and antigenic epitopes are contemplated for use in the treatment of pathological infections, especially to prevent bacterial adhesion to collagen. The claimed nucleic acids as well as claimed anti-CBP antibodies will also be of use in screening, diagnostic and therapeutic applications including active and passive immunisation and methods for the prevention of bacterial colonisation in an animal such as a human. The CBP epitopes are also contemplated for use in the preparation of vaccines and as carrier proteins in vaccine formulations, as well as infantion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antibody that interacts with collagen binding domain of Staphylococcal cna gene product - useful to prevent bacterial sepsis in animal infected with Staphylococcus aureus
                                                                                                                              Collagen binding protein; ona gene; sepsis; infection; microbial surface component régonising adhesive matrix molecule; MSCRAMM; adhesin; vaccine; immunisation; diagnosis; therapy;

```
The invention relates to isolated polynoticitie (1) and only peptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The characteristic and gene mapping, and in recombinant production of (II). The characteristic and gene are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving cuantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

AAM25963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiniflammatory; antipheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system, virucide, antibacterial; endocrine; cardiant; central nervous system, virucide, antibacterial; endocrine; cardiant; cardiavascular; antianaemic; antiaggregant; haemostatic; vulnerary; antidabetic; cytostatic; neuroprotective; antidaperssant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides are useful for screening for sonding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, reuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, genetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, costeoporosis, severe combined immunodeficiency, eczema, allergic rhinitis, asthma, diabetes, cancer, multiple sclerosis, depression, Alzheimer's disease, Parkinson's disease, neurodegenerative and
                                                                                                                                 Human; cancer; ulcer; HIV infection; human immunodeficiency virus; antinflammatory; antirheumatic; antiarthritic; immunosuppressive; antianferenial; endocrine; cardiant; central nervous system; virucide; antimutagen; cardiavascular; antianaemic; anemia; antiaggregant; haemostatic; vulnerary; antiulcer; osteopathic; eczema; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidabetic; cytostatic; immunostimulant; gene therapy; antisense therapy; vaccine; inflammation; antianaphylactic; rheumatoid arthritis; septic shock; pancreatitis; cardiac dysfunction; neuropathology; cardiac anaphylaxis; autoimmunity; genetic disease; haematopoletic disorder; platelet disorder; asthma; thrombocytopaenia; osteoporosis; severe combined immunodeficiency; allergic rhinitis; diabetes; multiple sclerosis; depression;
                                                                                                                                                                                                                                                                                                                                                                                                   Alzheimer's disease, Parkinson's disease, neurodegenerative disorder, neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated human polynucleotides encoding polypeptides, useful for the treatment and diagnosis of e.g. cancer, ulcers and HIV infection -

The present sequence is that of a partial sequence of human SOC-2/CRAC-1 (full-length sequence given in AAV95435), as deduced from a partial cDNA clone (see AAA4918). SOC-2/CRAC-1 is a member of a novel family of store operated channel (SOC) or calcium release activated channel (CRAC) polypeptides that modulate Ca2+ flux into and out of a cell, and which may be activated upon depletion of Ca2+ from intracellular calcium stores, allowing Ca2+ influx into a cell. SOC-2/CRAC-1 is expressed predominantly in human hamanatopoletic cells, liver, spleen, heart and kidney.

Compositions for expressing functional SOC/CRAC calcium channel polypeptides in cells are expected to be useful for treating patients that have reduced extracellular calcium influx into their socycrace-expressing cells. They will also be useful for delivering therapeutic and/or imaging agents to such cells to modulate proliferation and growth. SOC/CRAC polypeptides also represent inguible and/or identifying inhibitors that block imaging and/or identifying inhibitors that block inguible and or socycrace conjugated to SOC/CRAC polypeptides to which drugs or toxins can be conjugated for delivery to SOC/CRAC expressing cells. Methods for determining the level of SOC/CRAC expressing in a subject can be used to assess the presence, or absence, or stage of a proliferative disorder,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New SOC/CRAC calcium channel polynucleotides and polypeptides used to diagnose and treat proliferative disorders associated with the channel, and to screen for novel modulators of the channel -

The invention relates to isolated human polypeptides (which may be cytokines) and the polynucleotides encoding them. The protein is useful for identifying a compound which binds to it (e.g. modulators, agonists and antagonists). The polynucleotides are useful as an array for mismatch detection. The proteins and nucleic acids are useful as nutritional sources or supplements. The protein exhibits exhibits activity relating to cytokine, cell proliferation, cell differentiation, antinflammatory, stem cell growth factor activity, immune stimulating or immune suppressing and activin or inhibin related activities. The proteins (and antibodies raised against them) and nucleic acids are therefore useful in the diagnosis and treatment of diseases and disorders such as cancer, central and peripheral nervous system diseases and neuropathies, Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptides and nucleic acids, useful for diagnosis, treatment of inflammatory, autoimmune, neurological, myeloid or lymphoid cell, bone degenerative disorders, cancer and promoting wound healing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wang J, Xu C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain readrion (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of or identifying expressed genes. (I) is useful in gene therapy techniques of the contract dependent on the contract of the contract dependent on the contract of the contract dependent on the contract of the contract of the invention.
                                                                                                                                                                              ö
(ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

The polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically the nucleic acids encoding the polypeptides and cells genetically. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.
Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding a range of human polypeptides, useful in genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; vaccination; gene therapy; nutritional supplement;

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by 2. A cones. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. The acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the corresence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies contacting a specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by cerzyme linked immunosorbent assay (ELISA).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and probes, CC polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The color color color color cast and seasons are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving C (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical cimaging of sites expressing (II). (I) and (II) are useful in medical climaging of sites expressing for color expression or biological activity. Coloratics, gene mapping, identification of mutations capponshible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and to produce other types of data and products dependent on DNA and collagnostic amino acid sequences of the invention.

The present invention describes primer sets for synthesising sout the langth cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide comprises a 3'-end sequence which comprises and the complementary to a polynucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the complexity full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins, encoded by

kinase substrate MARCKS protein, a major cellular substrate. The convention relates to methods of inhibiting mucus secretion by a mucus-secreting cell by administering a compound that inhibits of mucus-secreting cell by administering a compound that inhibits of active fragments of MARCKS protein. Such compounds include a cative fragments of MARCKS protein such as MANS peptide (see AAV95897) and MA-PDS peptide (see AAV95897), which corresponds to phosphorylation site of MARCKS. The inhibitor compounds can be cused to freat conditions such as bronchitis, cystic fibrosis, chronic obstructive pulmonary disease, asthma, emphysema, pneumonia, influenza, rhinitis and the common cold. An alternative sequence for MARCKS is provided in AAV95899, which differs from the present sequence at 2 amino acid residues, Ala-84 (Ser) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Regulating mucus secretion by a mucus-secreting cell, useful for treating e.g. bronchitis, asthma or pneumonia, by administering a compound that inhibits or enhances myristolated alanine-rich C-kinase substrate protein
                                                                              mucus secretion; inhibitor; bronchitis; asthma; cystic fibrosis; chronic obstructive pulmonary disease; pneumonia; empysema; influenza; rhinitis; therapy.

The present sequence is that of human myristoylated alanine-rich C kinase substrate MARCKS protein, a major cellular substrate. The invention relates to methods of inhibiting mucus secretion by a mucus-secreting cell by administering a compound that inhibits MARCKS protein-related mucus secretion. Such compounds include active fragments of MARCKS protein such as MANS peptide (see AAY95897) and MA-PDS peptide (see AAY95897), which corresponds to phosphorylation site of MARCKS. The inhibitor compounds can be cused to treat conditions such as bronchitis, cystic fibrosis, chronic obstructive pulmonary disease, asthma, emphysema, chronic obstructive pulmonary disease, asthma, emphysema, crown influenza, rhinitis and the common coid. An alternative sequence of or MARCKS is provided in AAY95898, which differs from the present sequence at 2 amino acid residues, Ser-84 (Ala) and

New polynucleotides encoding human heat-shock protein-binding protein, HspBP-1 and HspBP-2, useful for investigating the effects of heat shock-protein regulation -

Disclosure; Page 35-36; 38pp; English.

The present sequence is the sequence for the zebrafish heat shock protein-binding protein (HspBPF), which is involved in the regulation of the heat shock proteins, which are components of the development, apoptosis and cellular stress pathways. The human homologue is useful not only for research into these areas, but also for treating disorders such as heart disease, hypoxia and cancer.

```
and daptation (IA) proteins given in AAB79023 to AAB79242. The c. glutamicum HA genes (I) can be used in vectors for expression in host cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or pyrimidine base, nucleoside, nucleotide, lipid, saturated or unsaturated fatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, glutamate, alanine, aspartate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleucine, arginine, proline, histidine, tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               used for diagnosing the presence or activity of Corynebacterium diphtheriae. (I) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or Brevibacterium. The HA proteins encoded by the (I) are used to maintain homeostasis in C. glutamicum or help the microorganism to adapt to
nonproteinogenic amino acid; purine base; pyrimidine base; nucleoside; nucleotide; lipid; saturated fatty acid; unsaturated fatty acid; diol; carbohydrate; aromatic compound, vitamin; cofactor; polyketide; enzyme; diagnosis; Corynebacterium diphtheriae; genetic engineering; Brevibacterium; environmental condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated Corynebacterium glutamicum nucleic acid for production or modulation of production of fine chemicals such as amino acids, nucleosides, nucleotides, lipids, fatty acids, carbohydrates, vitamins or enzymes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zelder O,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides a number of nucleotide and protein are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from Coryneform bacterium. Coryneform bacterium, Coryneform bacterium, Coryneform bacterium, Coryneform bacterium, Coryneform bacterium are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                        S, Hayashi M, Ochiai K, Yokoi H;

AAF71138 to AAF71357 encode the Corynebacterium glutamicum homeostasis and adaptation (HA) proteins given in AAB79023 to AAB79242. The C. glutamicum HA genes (1) can be used in vectors for expression in host cells and production of fine chemicals, such as, an organic acid, proteinogenic or nonproteinogenic amino acid (preferred), purine or pyrimidine base, nucleoside, nucleotide, lipid, saturated or unsaturated tatty acid, diol, carbohydrate, aromatic compound, vitamin, cofactor, polyketide or enzyme. The amino acids produced can be lysine, glutamine, glutamate, alanine, aspariate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleucine, arginine, proline, histidine, trosine, phenylalanine, or tryptophan. The fine chemical production can used for diagnosing the presence of (1) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium diphtheriae. (1) can be used to map the C. glutamicum genome or can be used as markers for genetically engineered Corynebacterium or benevibacterium. The HA proteins encoded by the (1) are used to maintain homeostasis in C. glutamicum or help the microorganism to adapt to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Metallo-protease deficient fungus with site selected DNA disruption - and Aspergillus metallo-protease genes, useful in protein production to reduce protease activity hence protein degradation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Aspergillus nidulans; metallo-protease; pepH; protein degradation;

                                                                                                                                                             Intigg are useful for ince production of incertaincy used and incertainty and incertainty of proteins e.g. for food processing, since reduced protease activity minimises the chance that, and rate at which, the proteins are degraded during production. DNA sequences encoding metallo-proteases can be used to produce metallo-protease deficient fungi, by transforming a filamentous fungus mutant with the constructs and selecting a transformed fungus with reduced metallo-protease activity. They are also useful for producing filamentous fungal metallo-protease, by culturing filamentous fungi transformed with the constructs under suitable conditions for sequence expression and recovering the metallo-protease. Such metallo-proteases are useful to assess in vitro whether proteins which it is proposed to produce a fungal host are susceptible to the protease, so determining which metallo-protease genes need to be inactivated in the host. They are also useful in industrial processes.
Aspergillus nidulans from the present invention. The present invention describes a new protease deficient filamentous fungus, optionally with reduced extracellular acid protease activity, containing a site selected disruption of DNA resulting in reduced metallo-protease activity. The fungi are useful for the production of (heterologous and homologous)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

The neutral protease II can be expressed in Saccharomyces cerevisae and can be produced efficiently and in a secreted form.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the vipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Carr GJ;

                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is a caffeic O-methyltransferase of maize, encoded by a clone (see AAX25202) isolated from a maize line B73 cDNA library. The invention provides methods and compositions relating to altering light biosynthesis and/or the lighth composition of plants. Isolated nucleic acids (see AAX25196-216) that code for plants. Isolated nucleic acids (see AAX25196-216) that code for proteins (see AAX05657-77) involved in lighth biosynthesis are claimed. Also claimed are recombinant expression cassettes, host cels (see Aax1919 maize or sorghum), and transgenic plants and seeds. The claimed nucleic acids can be used to transform a plant to modulate lighth biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lighth biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) lighth biosynthesis in the plant. The plant lighths can be used as chemical feedstock. Plant and in the pulp and paper industry. Decreased lighth content can be used as a fuel source, and in the pulp and paper industry. Decreased lighth content capes.

The protein shows a high degree of sequence similarity to human pre-alpha-1-antitrypsin precursor. The serpin and its coding sequence are used in the diagnosis and treatment of disorders related to abnormal level of the protein or mutation in the nucleotide sequence. The serpin can be used for treating disorders characterised by degradation of extracellular matrix, e.g. cancer, arthritis, multiple sclerosis and immune system disorders, for treating wasting associated
immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nseq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAY34584-Y35879 represent the proteins encoded by all the open reading frames in the complete genome (see AAX91990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae gemome (see AAY34584-Y35879) can be used in
                                                                                                                                                                                                                                                                      Product is a biosynthetic component involved in the synthesis of protease. The protein may be produced from a transformed S.cerevisiae expression system for the large scale production of protease.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

with excessive protease production during inflammation or neurodegenerative disorders e.g. Kallmann's and Down's syndromes, Alzheimer's and Huntington's diseases. It may also be used to reduce excess levels of prolactin in the treatment of galactorrhea and hypogonadism, and decrease the amount of free circulating somatostatin to prevent somatostatin's inhibitory effect on the release of growth hormone. The fusion of this protein to His-tag, HA-tag, IgG domains, etc. facilitates protein purification and fusion to IgG-1, IgG-3 and albumin increases the half life time in vivo.
                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; protease; protease inhibitor; protease and protease inhibitor; protease the state of the

as: anti-human immunodeficiency virus (HIV); antidabetic; antityroid; immunostimulant; immunodeficiency virus (HIV); antidabetic; antityroid; immunostimulant; immunostimulant; immunostimulant; immunostimulant; immunostimulant; immunosuppressive; nephrotropic; antigout; thyromimetic; cytostatic; antiatherosclerofic; rungicide; protoacacide; antiatreriosclerofic; antiatherosclerofic; virucide; antipsoriatic; and hepatotropic. PPIM polynucleotide and protoacacide; and be used in the diagnosis, treatment and prevention of autoimmune/inflammatory disoacers such as AIDS, DiGeorge's syndrome, severe combined immunodeficiency disease (SCID), Chediak-Higashi syndrome, disease, Addison's disease, autoimmune thyroiditis, Crohn's disease, diabetes mellitus, Good pasture's syndrome, wiral, bacterial, fungal, parasitic, protoacal, and helminthic infections and cell proliferative disorder such as arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, psoriasis and cancer. PPIM polynucleotide sequences can be used in somatic or germline gene therapy and in diagnosis of diseases. They can also be used in generating penomic sequences and in molecular biology techniques.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

Patent No. 6127161
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Leucine Aminopeptidase Gene, Recombinant DNA, and
TITLE OF INVENTION: Process for Producing Leucine Aminopeptidase
FILE REPERENCE: PH-622
CURRENT APPLICATION NUMBER: US/09/330,095
CURRENT FILING DATE: 1999-06-11
EARLIER APPLICATION NUMBER: JP-164611/1998
EARLIER FILING DATE: 1998-06-12
NUMBER OF SEQ ID NOS: 14
SOFTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                           ..
